Dear Workshop Attendee:

Welcome to the second workshop on High-Performance, Power-Aware Computing.

We are very excited to be holding this event a second time. As we noted last year, power management is of great importance high-performance computing. This importance has not diminished in the last year. In fact, many important conferences—such as SC—2005, IPDPS, and PPoPP—presented several papers on power management. Industry interest in high-performance, power-aware computing is also increasing.

We received 18 papers this year, which is a 50% increase from last year. Each paper was reviewed by at least three reviewers. In the end, nine high-quality papers were accepted. We nominated the top three papers for publication, in extended form, in a special issue of the *Journal of Supercomputing*.

The program committee did another outstanding job this year. The deadline for submitting papers was pushed late, which gave the reviewers very little time to turn around the reviews. Nevertheless, our committee came through with thorough and professional reviews that were on time. Special thanks to Kirk Cameron for reviewing extra papers and to Wu-Chen Feng for assisting with all aspects of the workshop.

We hope to build upon this success and momentum to make HP-PAC a premier workshop.

Sincerely,

Vince Freeh
