

RAW: Reconfigurable Architectures Workshop

Workshop Description

Run-Time and Dynamic Reconfiguration are characterized by the ability of underlying hardware architectures or devices to rapidly alter (on the fly) the functionalities of its components and the interconnection between them to suit the problem. Key to this ability is reconfiguration handling and speed. Though theoretical models and algorithms for them have established reconfiguration as a very powerful computing paradigm, practical considerations make these models difficult to realize. On the other hand, commercially available devices (such as FPGAs and new coarse-grain FPFAs) appear to have more room for exploiting run-time reconfiguration (RTR). An appropriate mix of the theoretical foundations of dynamic reconfiguration, and practical considerations, including architectures, technologies and tools supporting RTR is essential to fully reveal and exploit the possibilities created by this powerful computing paradigm. RAW 2006 aims to provide a forum for creative and productive interaction between all these disciplines.

Workshop Chair

Serge Vernalde, IMEC

Program Chair

Jürgen Becker, Universität
Karlsruhe (TH)

Steering Chair

Viktor K. Prasanna, University of
Southern California

Publicity Chair (USA)

Ramachandran Vaidyanathan,
Louisiana State University

Publicity Chair (Europe, Asia)

Reiner Hartenstein, Kaiserslautern
University of Technology

Program Committee

Jeffrey Arnold Adaptive Silicon Inc.

Sergio Bampi Universidade Federal do Rio Grande

Jürgen Becker Universität Karlsruhe (TH)

Message from the Workshop Chair and Program Chair

We welcome you all to the 13th reconfigurable architectures workshop being part of the annual symposium on international parallel & distributed processing IPDPS 2006 held on the Island of Rhodes, Greece.

The workshop covers a range of actual and interdisciplinary topics: new reconfigurable architectures, design methods, run-time reconfiguration, algorithms and technologies.

Over more than one decade this workshop has been an unique forum promoting multidisciplinary research and new visionary research approaches in the area of reconfigurable computing.

Future design methodologies are also one of the key topics at the workshop, as well as new tools to support them. This year we are very happy to count 114 high quality submissions from 30 different countries all over the world. Based on at least 5 reviews per paper a thorough selection of 34 regular papers and 29 posters was done with the great support of all program committee members. In addition, two attractive keynote contributions enrich the content of this workshop. This year RAW provides an innovative platform for authors from 18 countries to present their qualified work at this workshop and to discuss it with all participants.

We would like to take the opportunity to acknowledge the effort and help from the program committee members and reviewers, and thank all authors and invited speakers for their contributions to the program. Many thanks to the steering chair Viktor Prasanna (University of Southern California) as well as to the publicity chairs Ramachandran Vaidyanathan (Louisiana State University) and Reiner Hartenstein (Kaiserslautern University of Technology, Germany) for their constant input and support of RAW 2006. Moreover, we would like to stress the great job of Michael Hübner, Matthias Kühnle and Christian Schuck (Universitaet Karlsruhe) for assisting us in all organizational matters.

We wish you a very prolific workshop and hope you will find these proceedings to be a valuable information reference for your future work.

Serge Vernalde, Workshop Chair
