◆ APPLY NOW

Even embedded applications sometimes need the power and flexibility of a desktop PC. If a PC fits your bill, you'll want to attend the sixth annual **Applied Computing Conference and Expo**, May 22–25 at the Santa Clara (Calif.) Convention Center. The conference, organized by Annabooks and sponsored by Intel and Microsoft, covers all aspects of adapting PC technology to the unique needs of the embedded market. There's even an "exciting" evening event with Microsoft's NT Embedded group!

Registration fees range from \$695 to \$1,345; hands-on lab sessions are an additional \$100. Exhibit-only registration (through 5/22) is free. For more information, call 408.297.8484 or see www.ac-conference.com.

◆ GET YOUR FILL OF JAVA

It's difficult to believe that five years have passed since the first **JavaOne** conference. There's a lot about Java that's hard to believe, but one thing's for sure—whether you worship Sun or just need Java to get your product going in the morning, JavaOne is the place to be. The conference this year focuses on the Java 2 platform and extensions such as JavaBeans and Jini.

The conference runs June 6–9 at Moscone Center in San Francisco, and is preceded by a two-day Java University program. Early conference registration costs \$1,395 to \$2,495 (by May 31). Another \$275 will get you a leather aviator jacket with special Java insignia. More information and electronic registration is available online at www.java.sun.com/javaone.

◆ BECOME BROADMINDED

The latest in high-bandwidth hardware, software, and services will be on display at **Broadband Year 2000**, held June 26–30 at the San Jose Convention center. The show combines the former ATM Year, GigNet, and Interactive Broadband Services Technology conferences to provide a comprehensive overview of this complex and fast-moving market.

The show has enlisted the aid of bitpipe communications, Cahners In-Stat Group, and the Yankee Group to provide white papers, a bi-weekly email update on the broadband market, and special presentations at the event.

With early registration (through June 9), tutorials are \$795; registration packages cost \$1,295 to \$1,795. Access to the exhibit floor (June 28–29) is free. For more information, visit www.broadbandyear.com or call 508.647.4858. ◆
